

Reintroduction of Modular Reservoirs with Zerk Fill Option Only

Lubecore is reintroducing the zerk fill only option on modular reservoirs as a new part number.

Customer feedback indicated that some end users need a clear differentiation between fill ports on EP0 and EP2 pumps.

Modular reservoirs with zerk fill only will have the following part numbers

- 4kg: 58.497 Reservoir, Modular, Top Spring, EP2 Labels, 4kg, Zerk Fill
- 6kg: 58.498 Reservoir, Modular, Top Spring, EP2 Labels, 6kg, Zerk Fill

Lubecore intends to continue offering the hydraulic quick disconnect fill option on the 57.497 and 57.498 reservoirs as the standard as noted in TCM LCC2022-002. Please ensure that you order the configuration you desire to meet your customers needs.

As a visual aid, a 4kg pump with a 57.497 reservoir is shown compared to a 4kg pump with a 58.497 below.
