

Lubecore Technical Announcement

New 200 BAR Pressure Relief Valve

Lubecore is pleased to announce the introduction of its improved 200 BAR pressure relief valve (54.354) for Progressive Automated Lubrication Systems.

This improvement leads to a better pressure relief tolerance which we were able to achieve by utilizing our in-house machining.

- This enhancement comes without any added cost
- Both parts, current and new design, are fully interchangeable

Figure 1: 54.354, current 200 BAR Pressure Relief Valve

Notice the generation marks all around the cap to indicate the improved version.

Figure 2: 54.354 with generation marks (hash) all around the cap

Watch for further communication with regards to the function of the pressure relief valve and best practices for troubleshooting pressure relief valves on Progressive Automated Lubrication Systems.
