

Pneumatic Pump - 25 Bar Pressure Switches

Lubecore International has made a running change in all EP-0 Pneumatic Pumps.

EP-0 Pneumatic Pumps up until Feb 2011 came with 40 bar (580 psi) pressure switches. Starting at this, all have been supplied with a 25 bar (363 psi) pressure switch, part number:

10.204. - Pressure Switch for Pump - 25 BAR

This change is made to reduce false pressure alarms delivered to machine operators. There will be a manifold (1/4") version available soon as well, which can also be used in the electric gear pump.

10.031 copper washer used with all pressure switches.
