

Temporary Replacement for Mainline Korilla

Lubecore has had to find a temporary alternative to mainline Korilla, 30.204, due to our vendors' inability to completely fulfill our orders. Lubecore, therefore, is temporary replacing the 11.3mm x 6.3mm Korilla mainline with a 12.1mm x 6.35mm Korilla mainline which meets the same pressure specifications as our standard mainline Korilla. The sealing clamps used to fasten the Korilla to its end fittings must also be updated to accommodate the larger OD Hose.

Lubecore will revert back to the standard 30.204 Korilla and 20.233 clamps as soon as the 30.204 lining is back in stock which is expected to be at the end of April 2022. Table 1 below shows the temporary replacement numbers.

Current P/N	Current Part Description	Temp Replacement P/N	Temp Replacement Part Description
30.204	Lining, Korilla, Mainline, 11.3mmx6.3mm, Single, Unfilled	30.209	Lining, Korilla, Mainline, 12.1mmx6.35mm, Single, Unfilled
30.254	Lining, Korilla, Mainline, 11.3mmx6.3mm, Single, Filled	30.259	Lining, Korilla, Mainline, 12.1mmx6.35mm, Single, Filled
20.233	Clamp, 11.9mm, For 11.xmmx6.3mm Hose, Stainless Steel	20.226	Clamp, 12.7mm, For 12.1xmmx6.3mm Hose, Stainless Steel

Please contact Lubecore Inside Sales to make substitutions. Lubecore will not assume that you would like the replacement parts without notice from you. If you would like to order mainline Korilla and find the alternative acceptable, any orders for 30.204, 30.254, or 20.233 can be replaced by Lubecore Inside Sales with 30.209, 30.259, or 20.226.

Please note that the temporary replacement 30.209 Korilla lining will work with standard fittings such as the 21.247.

Another TCM will be send announcing the time when Lubecore is able to return to the standard 30.204 Korilla Lining and associated filled assembly and clamp.
